230830

**Contact:** Ben Alter

**Phone #:** 973-256-7800

**Of:** GZA GeoEnvironmental, Inc.

**Date:** Feb. 7, 2005

**Case Name:** Unimatic Manufacturing Co.

**Case #:** E20010335

---

**RE:** follow-up to e-mails dated Jan. 31 and Feb. 4, 2005

---

I returned Ben Alter's call. Ben informed me that the chip sampling will be completed today. I asked that more notification is given to me so that I can be on-site for field sampling and a site visit.

Surrogates: Ben informed me that the surrogate issue will be addressed in the next RI.

Depth to Water (DTW) on the soil logs: shown as the delta symbol, right hand column. I told Ben that is critical to have DTWs where PCBs remain in the saturated zone because some logs end at 16 but do not show "wet" or a DTW. Ben told me that is because split spoons were not taken/logged for all boreholes.
